COMMERCIAL/RETAIL

Commercial and retail facilities rely heavily on appearance of their buildings to project a favorable image to their customers. A&S Building Systems pays strict attention to every detail, from roof slope to overhang design, we make sure that each project is as aesthetically appealing as it is functional.

RECREATIONAL FACILITIES

Warehouse and distribution facilities require clear span designs, which provide immense unobstructed manufacturing and storage areas. The fabrication of superior products like the Long Bay System (LBS), translates into clean architecturally appealing structures.

Whether you're interested in a standing seam or built up roof system, tilt up concrete or metal wall panels, A&S Building Systems can maximize your building construction. To learn more, please review our Long Bay Systems Brochure for additional details.

HANGARS & AVIATION

A&S Building Systems specializes in the design and construction of sales/service complexes, single hangars and maintenance facilities. We can provide hangar designs based upon standard sizes, or create custom designs to meet your exact requirements and specifications. We have established a leadership position in hangar design and construction, based upon our experience, exceptional designs, and above all, our ability to provide our customers with a single source capability. To learn more, please review our Hangar and Aviation Brochure for additional details.

WAREHOUSE / DISTRIBUTION FACILITIES

From gymnasiums to ice arenas, swimming pools to bowling alleys, batting cages to training facilities, A&S Building Systems can handle all your recreational needs. With an increase in demand for indoor recreational facilities, A&S has the experience and know how to meet your requirements on-time and within budget.

RELIGIOUS FACILITIES

With the evolution of new products and services, religious facilities have become a standard type of construction in the metal building industry. A single source capability affords A&S Building Systems a unique position in the architectural market. Each project is specifically designed for your requirements and specifications. Because of the increasing complex nature of construction-related matters, such as site selection, code compliance, scheduling, coordination of subcontractors, and quality control of the completed project, A&S Building Systems believes the best return on a client's investment is achieved by working with a professional A&S builder. For this reason, A&S Building Systems markets its metal building systems through its authorized Builder network.

EDUCATIONAL FACILITIES

Many educational buildings have a strict budget, which require school architects to turn to metal building construction as a cost-efficient alternative for classroom facilities. A&S Building Systems, a division of NCI has the experience in providing high profile school projects, in conjunction with MBCI, another NCI division. This partnership has proven time and time again to be a winning combination. Whether you need a gymnasium, covered Olympic sized pool, or a brand new school complex, A&S Building Systems is right on target.
