

IPS IPP II

DESCRIPTION:

The IPP II wall panel is designed for interior wall partitions and exterior wall applications. The appealing flat exterior and interior skins have a Mesa profile. The versatility of this panel allows for a uniform appearance from outside to inside and from room to room in partition applications.

This panel can also be utilized in Cold Storage facilities. The recommended thickness is four inches or more and width is 42 inches wide. Both the interior and exterior skins of the panel are 26-gauge. The interior panel is coated with straight polyester USDA White.

FEATURES:

- The IPP II Panel utilizes concealed clips and eliminates thermal short circuits.
- The standard exterior surface is Galvalume[®] coated steel with silicone polyester or Kynar 500[®]/Hylar 5000[®] coatings.
- IMPs allow for fast assembly times and easy installation, resulting in reduced construction labor costs and earlier business starts.
- The IPP II Panel can be used for both interior and exterior applications.
